

July 2024

Policy declaration for Safety, Health, Environment and Quality

SPIE Belgium is an integrator of solutions and multi-technical services in the fields of energy, electricity, instrumentation, mechanics, industrial piping, automation, traffic management and HVAC, with a network of sites in Belgium and Luxemburg. We want to build **lasting relationship with our clients** by having **constant attention for safety, health, environment, quality and ethics**.

Safety, health, environment, quality, ethics, efficiency, continuity and profitability get equal attention while determining and achieving company objectives. **The safety and health** of our employees and others **are our primary concern**.

We continually focus our attention to improve our performance in all fields of sustainable development, particularly on lowering our CO2 impact (scope 1 and 2), to ensure that as a solid company we can consolidate and improve our position in the market as a responsible company and to continue our expansion. Safety, health, environment quality and ethics are regularly discussed during our meetings and featured in communications.

SPIE commits its employees and subcontractors:

- To **strictly follow legal requirements** as well as the rules, requirements and instructions imposed by SPIE and its clients;
- To conduct themselves in ways that **do not endanger themselves or others** by respecting the SPIE safety code and by proactively protecting each other;
- To correctly **use tools and protective equipment** and manipulate materials in a proper manner;
- To **respect the agreed upon measures to protect the environment and too lower our carbon footprint**;
- **To react immediately** upon discovery of **unsafe or unhealthy situations or environmental risks**, as well as anomalies and to report these to their supervisor.

To fulfil these obligations our **employees** are **regularly informed** about **and trained** in safe and environmentally friendly practices, prevention of accidents and environmental pollution, emergency procedures and ethical principles.

To support this policy **SPIE Belgium fixes annual objectives** and **follows up their progress, and monitors their achievement** both on the company level and within all business units and BU. Senior management reviews the efficacy of the management system at least once a year.

The management team of SPIE Belgium is convinced it is possible to achieve the required quality, to prevent injuries as well as damage to goods and the environment (and thus financial damage) by applying a structured policy tailored to these goals. It has committed to continually optimise the management system to improve its performance.

This can only be achieved through the **commitment of all our employees**, through **teamwork** and **optimum use of available resources**.

Pascal Lekeu
